WARRANTY

Automatic Products international ltd. (APi) expressly warrants these automatic merchandisers (the "Unit"), manufactured by it, to be free under normal use and service from defects in material or workmanship for a period of two (2) years from the date of delivery of this Unit to the original purchaser. This warranty extends only to the original purchaser of the Unit. The exclusive remedy for this warranty is limited to the repair or replacement, at APi's sole option, of any part or parts of the Unit that are returned to APi or to the authorized dealer or distributor of APi from whom the unit was purchased with all transportation charges prepaid, and which, on APi's examination, shall, conclusively appear to have been defective. This warranty does not:

민민민민민민민

旭

[린틴린린린린린]

包

回

- a. extend to any Unit, or part thereof, that was subjected to misuse, neglect, or accident by other than APi after its delivery to the original purchaser;
- b. extend to any Unit, or part thereof, that was modified, altered, incorrectly wired or improperly installed by anyone other than APi or used in violation of the instructions provided by APi;
- extend to a Unit which has been repaired or altered by anyone other than APi or authorized dealer/distributor;
- d. extend to a Unit which has had the serial number removed, defaced or otherwise altered;
- e. extend to plastic or glass windows, lamps, fluorescent tubes and water contact parts;
- f. extend to any unit used outdoors;

g. extend to accessories used with the Unit that were manufactured by some person or entity other than APi.

API DISCLAIMS ALL OTHER WARRANTIES OF ANY KIND AS TO THE UNIT AND ALL WARRANTIES OF ANY KIND AS TO ANY ACCESSORIES. THIS DISCLAIMER OF WARRANTIES INCLUDES ANY EXPRESS WARRANTIES OTHER THAN THE LIMITED WARRANTY PROVIDED ABOVE AS TO THE UNIT AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE AS TO THE UNIT AND ANY ACCESSORIES. UNDER NO CIRCUMSTANCES SHALL API BE RESPONSIBLE FOR ANY INCIDENTAL, CONSEQUENTIAL OR SPECIAL DAMAGES, LOSSES OR EXPENSES ARISING FROM OR IN CONNECTION WITH THE USE OF, OR THE INABILITY TO USE, THE GOODS FOR ANY PURPOSE WHATSOEVER.

APi or any other person is authorized to assume for APi, or agree to on behalf of APi, any other liability or warranty in connection with the sale of this unit.

APi reserves the right to make any changes or improvements in its products without notice and without obligation, and without being required to make corresponding changes or improvements in Unit theretofore manufactured or sold.

Snackshop LCM has been designed from superior engineering and with quality throughout. It has been built of rugged construction for many years of reliable trouble-free operation. (Note: For indoor use only.)

All equipment manufactured by Automatic Products int'l lyd. is designed to work properly in a temperature range of 10°C to +50°C (50°F to 104°F) in still air (75% R.H. non-condensing). The unit is capable of being stored in a temperature range of -18°C to +68°C (0°F to 155°F), provided proper precautions are taken for machines that contain a water system to prevent physical damage to components due to freezing, and that the machine is not stored on direct sunlight.

To achieve the most economical trouble-free operation from your Snackshop LCM, it is recommended that this service manual be thoroughly read and instructions followed pertaining to all loading and servicing, etc., of the vendor.

Should you have any questions pertaining to this manual or the vendor, please contact your local Automatic Products Company distributor or write directly to:

unpacking

The Snackshop LCM is assembled and packed so that a minimum amount of time is necessary for preparation to install it on location. The following steps are recommended to insure correct unpacking.

 Shipping Damage. Thoroughly inspect the exterior of the carton for damage which may have occurred during shipment. Report any damage to delivering carrier and follow their instructions.

NOTE: Machines with refrigeration units delivered on their sides should be stood upright for 24 hours before the machine is plugged into an outlet.

- Remove staples from lower edge and those at top of carton, and slit carton vertically at the taped corner. Open and remove carton. Remove the remainder of the packing material. Machines shipped with a lock in place, the keys are located in the coin return cup.
- 3. Removing Vendor with a Fork Lift Truck. Remove the carton from the vendor. Open the door on the vendor and remove the hold down bracket at the front center of the cabinet base and close the vendor door. From the front of the vendor, tip the vendor backward and run forks under the cabinet.

- 4. On machines with lock in place, unlock, and turn handle to open door. When no lock is furnished, remove clip and turn handle. Swing door to its full open position.
- 5. Remove all packing tape and paper from various areas of machine and the shipping strap.
- Warranty. The warranty card is attached to the cover of this manual. It must be filled out in full and mailed at once to insure coverage.

IMPORTANT: A set of anchoring brackets are sent with each machine. The kit is located in the bottom of the machine complete with instructions. It is recommended that this kit be installed to prevent shifting of the machine. Part # 660438

WATCH THROUGHOUT THE MANUAL FOR THIS
SPECIAL ◆ DIAMOND MARK.THIS INDICATES A
POINT OF SPECIAL INFORMATION OR A HINT
THAT WILL ASSIST YOU IN SETTING UP,
OPERATING OR TROUBLESHOOTING THE
MACHINE.

CAUTION: Certain procedures in both the operating section and the service section require that voltage be on the machine. Only trained personnel should perform this function. Exercise extreme caution while performing these procedures. These procedures will be marked with the lightening bolt symbols as it appears at left.

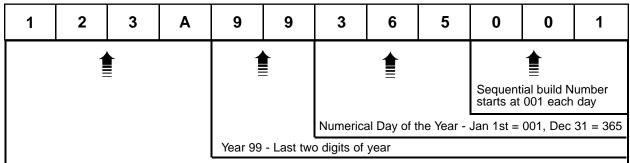

CAUTION: Certain procedures in both the operating section and the service section requires a qualified trained technician to perform the particular task at hand. These procedures will be marked with the exclamation symbol as it appears at left.

Serial Number Definition

Automatic Products int'l ltd. has introduced a new serial numbering method to permit better tracking of machines, and any changes that occur. This information is being provided to you so that you understand the information contained in the serial number, and so that when you are making an inquiry about a specific machine, or require a warranty replacement, that you provide us with the complete serial number. The location of the serial number plate in the machines has not changed. The serial number plates are located inside the machine in the upper right hand corner of the cabinet, and adjacent to the power cord on the back of the cabinet.

It is essential that the complete serial number be reported when reporting any problems or claiming any warranty replacements.

The new serial number format is explained in the example below:

First Digits indicate model, example shown is a 123A Glassfront Merchandiser - The machine identification may contain up to six characters dependent upon the model.

<u>Suffixes</u>

- A indicates all design changes incorporated upon the introduction of the new chiller unit
- C indicates a chilled machine
- E indicates a machine built specifically for export outside North America

1. Leveling the Machine on location is important for the proper function of the machine. The four leveling screws in the legs are the means of leveling the machine. After positioning the machine, level machine in front to rear and right to left directions. After leveling, turn front right (lock side) leveling screw in about one-half turn to drop this corner slightly to make the door easier to close and lock.

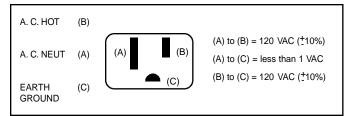

CAUTION: THIS MACHINE IS DESIGNED FOR INDOOR USAGE ONLY. ANY OTHER USAGE MAY VOID THE MANUFACTURERS WARRANTY.

CAUTION: THE FOLLOWING
PROCEDURE REQUIRES THAT THE
MACHINE HAVE POWER APPLIED AND
A POTENTIAL ELECTRICAL SHOCK
HAZARD EXISTS.

Voltage and Polarity Check. It is important that this
machine is hooked up to the proper voltage and polarity.
Using a voltmeter, perform the following checks from the
illustration shown.

NOTE: Should the readings be different from above, have a certified electrician correct the problem.

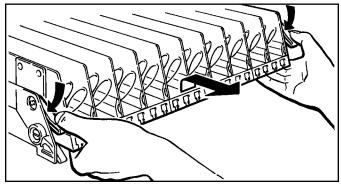

Figure 1. Moving shelf to loading position

3. Loading Snack Shelves. Open door to full open position, push down on white and gray plastic lock levers (Figure 1.) on right side panel by shelf to unlock shelf, holding lever down. Grasp the shelf slightly and pull forward until shelf reaches its stop. The shelves tilt down (do not drop) to make loading easier. Only one product shelf should be in the loading position at a time. When returning a shelf, be sure the shelf is in its full home or vend position. Begin loading with the top shelf. Move it to the loading position. The height spacing for items is greatest in this shelf and the tallest bagged items should be placed there. Soft items, such as pastry, pies, etc., should be placed in the lowest snack shelf, making the drop distance as short as possible.

IMPORTANT: Product must not be forced into the spiral spaces but should fit freely. If the product is too tight, use a larger pitch spiral. The bottom of the product should be placed on top of the spiral wire that rests on the shelf surface. (Figure 2.) The width of the product must be greater than the diameter of the snack spiral. If it is smaller, the product may fall through when it is in the front, ready to vend position.

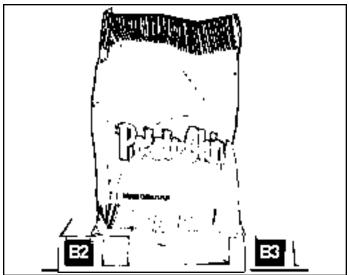

Figure 2. Placement of product on main product snack shelves and front end position of spiral.

4. **Removal of Spiral.** Grasp the front of the spiral and turn it clockwise. Lift the spiral up and off of the spiral lock and turn the spiral counterclockwise to lock it in place. Be sure the front end of the spiral is positioned properly (with the front end of the spiral pointing downward on the left side). (Figure 3.) The spiral lock is attached between the spiral retainer tabs. Give a light forward pull on front of the spiral to check if it is locked in place.

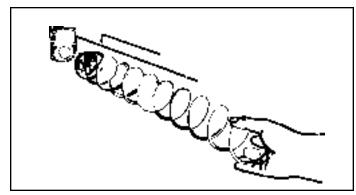

Figure 3. Removing and installing spiral.

5. **Product Spacers, 5-Selection Shelf.** A product spacer is used to reduce the width of the product area and should be used on any 5-selection snack shelf where the product width is 4-1/2" or less. Spacers should fit within 1/8" of the product but should not fit tight against the product. There are three positions in each snack space where these spacers can be placed. To install the spacer, align the lock ears (on the lower edge of the spacer) with one of the three sets of slots (one front and one rear). (Figure 4.) Push the spacer to the rear to allow the ears to enter the slots, then allow the spacer to move forward. Be sure the ears are in the same set of slots,

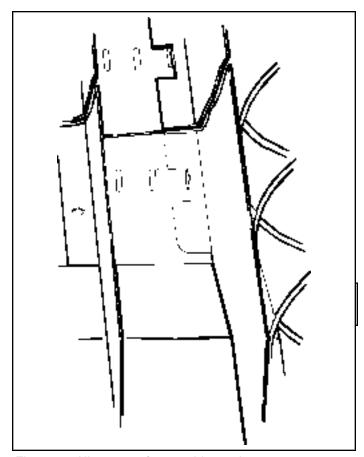

Figure 4. Alignment of moveable product spacers.

front and rear. (Figure 4.) Continue loading all spirals. Adjust with spacers where needed in the top shelf. Return the top shelf to the vend position and following this procedure, load the remainder of the large spiral shelves. The shelf divider separating the right (lock side) column from the next column is movable to allow vending of products wider than 5-1/2" in the second column. If this is used, the right column must be used to vend narrower products.

- 6. Loading Main Product Candy Shelves. The 10-selection (candy type) shelves are loaded similar to the 5-selection shelves, except that, the bottom of the product sits on the shelf in front of the spiral wire (Figure 5.) that rests on the shelf. These products must also fit properly in the spiral space. Do not force product into spiral. These spirals are removed and installed the same as the large spiral (Figure 3.), except that, the front end position is different (approximately 5 o'clock) (Figure 5.) and the front left side of the spiral must be behind the small tab located on the left side of the product space side wall. (Figure 5., Detail A)
- 7. **Product Spacers, 10-selection shelf.** The 10-selection shelves are equipped with a product spacer (Figure 6.) that can be pivoted from the right side of each product space. These spacers should be pivoted out to hold the product upright, but not tight against the product. Leave about 1/8" clearance between the spacer and the product.
- 8. Product Pusher. The machine contains enough pushers for you to install a pusher on each candy spiral. This plastic part is designed to push the top of the product forward while it is vending, helping it to fall from the shelf. It can also be used with products that have the wrapper end flap on the outside of the package. In this case, the pusher prevents these prod-

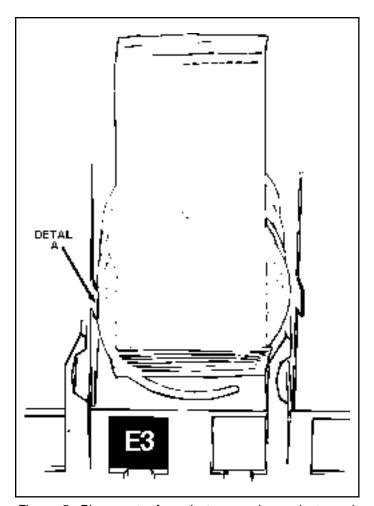

Figure 5. Placement of product on main product candy shelves and front end position of spiral.

ucts from hanging on the spiral by spreading the flap. The pusher is installed approximately 210 degrees from the front end of the spiral with the tab extending forward. (Figure 7.) Locate the pusher in its proper position, hold it against the spiral wire and push the semi-circular part around the spiral wire.

- 9. Bagged or Boxed Items in the 10-selection shelves, if not loaded properly, could be a problem. The sealed edge of the bag may get under the spiral wire causing the product to hang up after it has been vended. It is recommended that the lower edge of these types of product be folded forward and up (Figure 8.) next to the product before inserting into the spiral space. It is also recommended to use an 18 count spiral for bagged items because of the product settling to the bottom of the package.
- 10. Cigarette Vending from Snackshop LCM4. Cigarettes can be vended from the candy shelves using the 15 capacity spiral for the soft pack regular, king, 100mm or 120mm packs. The 12 capacity spiral should be used for box packs.
- 11. **Lock Product Shelves.** After all the product has been loaded, be sure all shelves are returned to their vend position behind the front roller guide.
- 12. **Install Proper Price Tabs** into price tab holder for each selection in the main product area. (Figure 9.)
- 13. **Loading Cans.** The machine is set for 12 oz. cans only. There are 10 can selections total in the machine. The top 5

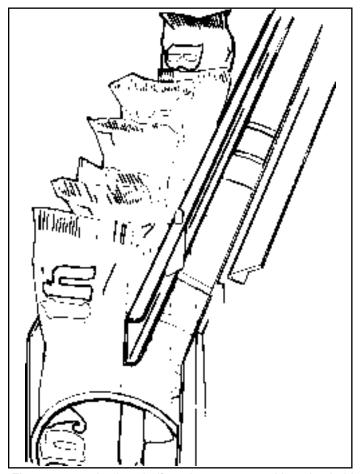

Figure 6. 10-selection shelf product spacer positioned to hold candy upright.

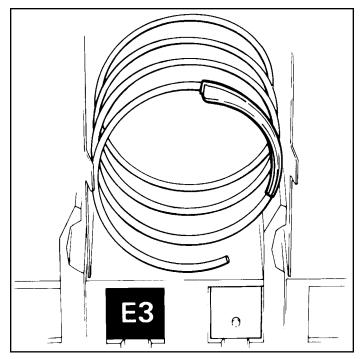

Figure 7. Location of product pusher on spiral.

selections hold 21 cans each and the bottom 5 selections hold 15 cans each. When loading the top cans there is a latch (See page 21, Item 20.) you can use to hold the door open for easier use.

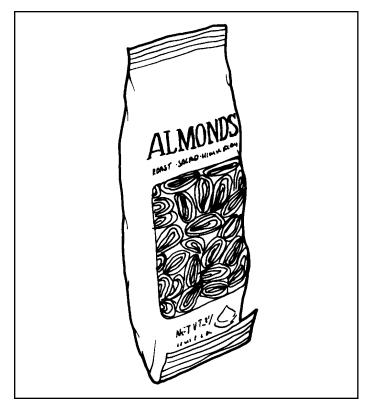

Figure 8. Fold bagged items bottom edge forward and up.

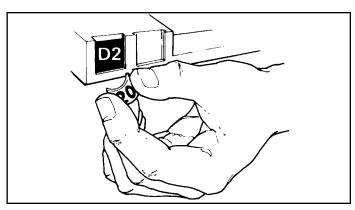

Figure 9. Installing price tabs.

CAUTION: THE FOLLOWING
PROCEDURE REQUIRES THAT THE
MACHINE HAVE POWER APPLIED AND
A POTENTIAL ELECTRICAL SHOCK
HAZARD EXISTS.

1. Control-Service Mode. The Service mode is entered by pressing and releasing the mode button located on the component side of the controller. A second depression of the mode button will exit the service mode and return the controller to the Sales mode. If a period of no keypad activity occurs for 25.5 seconds, the controller will automatically revert to the Sales mode.

Upon entering the Service mode, diagnostics will be displayed by the controller until an additional Service mode function has been selected. Diagnostics include the number of configured motors and defective or jammed motors.

Entrance to the Service mode clears the current credit and disables all credit acceptance (except for Protocol A devices, here the VMC is the slave and must not modify credit acceptance/accumulation). Selection motors are automatically configured upon power up, reset and exiting Service mode. The following list of functions are available while in the Service mode.

CAUTION: THE FOLLOWING
PROCEDURE REQUIRES THAT THE
MACHINE HAVE POWER APPLIED AND
A POTENTIAL ELECTRICAL SHOCK
HAZARD EXISTS.

- 2. PRESS #1 Coin Dispense Mode. Coins are dispensed from the inventory tubes by pressing key #1. The controller will display "coin" and wait for an additional key to be pressed as follows:
 - Pressing [A] dispenses the left coin tube (25¢)
 - Pressing [B] dispenses the middle coin tube (5¢)
 - Pressing [C] dispenses the right coin tube (10¢)
 - Pressing [D] dispenses the fourth coin tube (\$1 coin)

To exit this mode, press another function key or leave the service mode pressing the mode switch.

CAUTION: THE FOLLOWING
PROCEDURE REQUIRES THAT THE
MACHINE HAVE POWER APPLIED AND
A POTENTIAL ELECTRICAL SHOCK
HAZARD EXISTS.

- 3. PRESS #3 Accountability Mode. Vend count and cash total accountability will be displayed by pressing key [3]. The controller will display "Acct" and wait for an additional key to be pressed as follows:
 - a. Press button [A] to display total vend count. The vend counter will be eight digit numbers displayed as the upper four for 2 seconds followed by the lower four for 2 seconds.

Example: Displays "0001" (1st upper four #'s)
Displays "0025" (2nd lower four #'s)
"0001" together with "0025" = 10,025 vends.

b. Press button [B] to display total cash sales. The cash

counter works the same way as step "a"above, except the last two digits will have a decimal point in front indicating cents.

Example: Displays "0002" (1st upper four #'s)
Displays "01.20" (2nd lower four #'s)
"0002" together with "01.20" = \$201.20 total cash sales.

NOTE: The digital vend counter will rollover after 99,999,999 and the cash counter will rollover after \$999,999.95.

- c. Press button [C] to diplay total can vend counts. The display will show total cans vended the same way as step "A".
- d. Press button [D] to display total can cash sales. The cash counter works the same way as step "B" above.
- e. To exit this mode, press another function key or leave the service mode by pressing the mode switch.
- f. Press button [D] to display bill. Press [D] again. IMPORTANT!! Must be set on 20 for 5¢ increments.

CAUTION: THE FOLLOWING
PROCEDURE REQUIRES THAT THE
MACHINE HAVE POWER APPLIED AND
A POTENTIAL ELECTRICAL SHOCK
HAZARD EXISTS.

4. PRESS #4 - Price Set Mode. To begin the price setting procedure, press key [4]. The controller will display "Prc" and wait for a selection to be entered. Once the selection is entered, the current price will be displayed. The price can now be increased with the scrolling up (▲) button or decreased with the scrolling down (▼) button. (Figure 10.) The maximum price can be set to \$99.95. Setting a selection price to "0.00" will put it on free vend.

Step Procedure.

- a. In the Service mode, press [4] (displays "Prc").
- b. Press selection item to be priced (displays current price "xx.xx").
- c. Using the up (▲) or down (▲) buttons will change to the price desired. (Figure 10., Page 9.)
- d. Repeat steps "b" and "c" to price another selection.
- e. To exit this mode, press another function key or leave the Service mode by pressing the mode switch.

CAUTION: THE FOLLOWING
PROCEDURE REQUIRES THAT THE
MACHINE HAVE POWER APPLIED AND
A POTENTIAL ELECTRICAL SHOCK
HAZARD EXISTS.

5. PRESS #5 - Test Vend Mode. To test vend a single selection, press key [5]. The controller will display "SLct" and wait for a selection to be entered. Once the selection is entered, a vend of the motor will be attempted. If the vend is successful, the controller will blank the display and exit the test vend mode. If the selected motor fails, the controller will display "FAIL" for 2 seconds and then exit.

program operation

Step Procedure.

- a. In the Service mode, press [5] (displays "SLcT").
- Press the motor selection to test vend (machine will display selection and cycle motor unless vend test fails, which would display "FAiL").
- c. To test vend other selections, press [5] and repeat steps "a" and "b".
- d. To exit this mode, press another function key or leave Service mode by pressing the mode switch.

NOTE: Test vending a selection that had failed previously, will reset if the motor successfully completes a vend cycle.

CAUTION: THE FOLLOWING
PROCEDURE REQUIRES THAT THE
MACHINE HAVE POWER APPLIED AND
A POTENTIAL ELECTRICAL SHOCK
HAZARD EXISTS.

PRESS #6 - Diagnostic Vend Test. This feature can be used to test vend all configured motors within the machine before installing on location. The controller will display each selection as a vend attempt is made. If the vend is successful, the controller will continue on with the next selection. If the selected motor fails the controller will display "FAIL" for 2 seconds and then continue. When a vend attempt on all motors has been completed, the controller will blank the display and exit the test vend mode. To exit this mode, press another function key and hold until the current vend is completed or exit the Service mode.

- 6. Vend Option Mode. To enter the vend option mode, press key [E]. The controller will display "OPtn" and wait for additional key to be pressed for following features:
- a. Press key [A] Force Vend.
 (displays "FrcY" or "Frcn")

 Press key [A] again to toggle between force vend enabled ("FcrY") and force vend disabled ("Frcn").
- b. Press Key [B] **Escrow Enable.** (displays "EScY" or "EScn")

Press key [B] again to toggle between escrow enable ("EScY") or escrow disable ("EScn").

The escrow enable option allows the validator to return a bill inserted by a customer who changes their mind. The bill inserted will be held by the validator without being stacked. When the coin return button is pushed, the bill is returned.

c. Press key [C] - **Multi-Vend.**(displays "MuLY" or "MuLn")
Press key [C] again to toggle between multi-vend enable

("MuLY") or multi-vend disable ("MuLn").

The multi-vend option allows the customer the option to vend multiple items without reentering credit. Change will not be returned immediately after a vend and credit will remain on the display for up to 20 seconds. Escrow attempts will be valid at any time or change will be returned after 20 seconds of no vend activity.

d. Press key [D] - Can Drink.(displays "CAnY")Press key [D] again to toggle between "CAnY" and "CAn"

NOTE: The LCM4 machine should be set on "CAnY".

components

CAUTION: THE FOLLOWING
PROCEDURE REQUIRES THAT THE
MACHINE HAVE POWER APPLIED AND
A POTENTIAL ELECTRICAL SHOCK
HAZARD EXISTS.

- Power Supply. The 120VAC power cord from the wall outlet comes into the machine and plugs into the back of the main junction box located on the bottom right side of the cabinet. The voltage output to the board is 24 volts and is plugged in the top right corner (P1 position).
- Changers. The Snackshop LCM can use a variety of either Coinco or Mars changers. The machine is wired for only 24 volt models. The changers available are Coinco (9302L or 9302LF) and Mars (TRC-6010 or TRC-6010XV). In addition' control boards support MDB (Multi-Drop Bus) peripherals which include coin mechanisms, validators and card readers. MDB harness is P/N 680576.
- 3. Force Vend. When this menu is active, the display indicates "-FORCE VEND-N". Use the in and in keys to toggle the prompt between "N" and "Y". Depressing the ENTER key when the prompt is "Y" will enable the force vend option. If the prompt is "N", depressing the ENTER key will disable the force vend option. When the force vend option is enabled, once there is enough credit established to purchse the lowest priced item in the machine, the customer must purchse

- at least one item prior to requesting that any remaining credit be returned. Force Vend overrides Bill Escrow enable. Force Vend does not apply when debit cards are used.
- 4. **Controller Board**. This module is located on the inside door (above selector panel) of the vending machine. The controller will govern all vending activity within the machine. It has the capability of driving eighty selections.
- Mode Switch. The Snackshop LCM has only one mode switch that allows control of the machine functions. It is located on the control board. This switch will allow 6 modes of operation.
 - 1. Operate (vending mode)
 - 2. Change inventory
 - Accountability
 - 4. Price setting
 - 5. Test vend
 - 6. Vend option
- Operate Mode. The operate mode is when the machine is in the normal customer vending mode. The following steps explain the operation and sequence of events when making a vend.
 - a. Digital Display. During standby with no credit in machine, the digital display will show all zeros with a designated decimal point. When an alpha-numeric character is

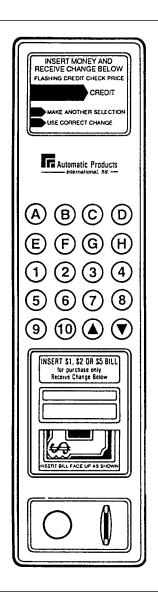

Figure 10.

pressed, this selection will be displayed.

- b. Credit Operation. Credit may be accumulated through either a coin changer or bill validator mechanism. Credit acceptance will disable when the accumulated credit equals or exceeds the highest priced item. If using an executive or "Protocol A" type coin mechanism, credit acceptance is controlled by the changer. The bill validator will be enabled when a combination of nickels and dimes, or nickels and quarters are available in the changer.
- c. Vend Process. After a keypad entry is made, the controller will determine if sufficient credit is available and the status of the selection. If the accumulated price and the motor is present, a vend attempt will be made for that selection. During this time, the selection will be shown on the display. If credit is less than the selection price, the price will be flashed for 3 seconds or until an alpha key is pressed. If the motor is flagged as bad, the selection and the "MAKE ALTERNATE SELECTION" LED will be flashed for 3 seconds or until an alpha key is pressed.
- d. Change Payment. Following a successful vend, the amount of change to be returned will be displayed for 2 seconds or until all coinage is paid back. A least coin

- payout algorithm will be implemented.
- e. Use Correct Change LED. If the changer's least value coin tube is empty, the "USE CORRECT CHANGE"LED will be illuminated continuously.
- 7. Selection Panel. The selection panel (Figure 10., Page 9.) on the Snackshop LCM incorporates that use of a self enclosed membrane switch panel. This eliminates the need for individual switches and wiring. The membrane switch panel is housed in a panel with individual buttons protecting the switch face. The panel front also houses the display lens. The display lens gives instructions to the customer for 2 conditions which might occur (make another selection/use correct change). The display lens also contains 3 LED lights.
- 8. Vend Motors. The Snackshop LCM incorporates the use of a high RPM DC motor. Due to new design, the vend motor may no longer be homed by hand. DO NOT TRY TO TURN THE SPIRALS BY HAND. DAMAGETO THE MOTOR WILL RESULT. It is also important to check polarity before applying current to the motor. 2 diodes and a capacitor are used to prevent circuit feedback and may have to be checked when trouble shooting motor problems.

NOTE: Use black color motor ONLY

- 9. Lighting System. There is only 1 fluorescent lamp in the Snackshop LCM. The lamp is located on the top, inside of the door which lights up the main product area. The starter is located on the hinge side of the lamp. The ballast and line filter is located on the top, front, left shelf support.
- 10. Main Product Shelves. There are three main product shelves per machine. Each containing either 5 or 10 selections. Each selection has its own motor mounted to the back of the shelf. Every shelf has its own harness and plug for connecting to the remainder of the circuit through the cabinet receptacle, located in the right, rear of the cabinet. The motors are the same on either type shelf. It is now possible in the Snackshop LCM to exchange a 5selection shelf with a 10-selection shelf or vice versa. You also have the capability to gain 1/2" either up or down on any shelf. To do this, the shelf should be removed and the cabinet back harness receptacle lowered or raised with the right and left shelf tracks.

NOTE: When exchanging the shelves, you will not need any parts, but you will have to reprogram the machines for prices and selections.

Removing Product Shelf.

a. Lift up and push the lock levers toward the back of cabinet. (Figure 1., Page 3.)

- b. Pull shelf to its loading position.
- c. Grasp shelf in front and rear center. Lift front of shelf up above horizontal and pull shelf forward while lifting.
- d. To install shelf, reverse above procedure.
- 11. **Delivery Bin.** This is located below the display window on the door and is mechanically operated. The linkage on the outside end of the delivery bin may require occasionally lubrication. Should the door become difficult to operate, place a small amount of grease on the arm tracks.

Removing Delivery Bin.

a. Remove the screws from the left and right bracket of the delivery bin. These screws fasten into the lower door brace and remove the screws and brackets at the top of the delivery bin.

b. Grasp delivery bin on both sides, lift up and pull back. Should bin be tight, rock it by lifting on one end, then the other.

Replacing Delivery Bin.

a.Locate lip on front edge of delivery bin, over lower edge of opening in door and behind trim. Press down along lip to make sure it is fully engaged between door and trim.

b. Install the 4 screws and 2 brackets, to secure bin to door.

- 12.Replacing Vend Can Motors or Sold-Out Switches. Before replacing a vend motor, the selection must first be emptied of cans. When replacing any of the five motors on the bottom, you must also remove all the cans from the selection directly above it to remove the old motor.
 - a. Remove the cans using any of the following methods:setting the machine to test vend, setting the vend price to 00, or removing the link arm from the vend motor and ratcheting the cans out manually. Once the cans are removed turn the main power switch off.
 - b. Remove the third shelf from the machine.
 - Remove the two middle screws on top of the cooler door and lift the door off.
 - d. Remove the link arm (Page 45, /Item 15.) from the motor assembly.
 - e. Remove the three screws holding the motor support plate to the rack assembly and swing motor up and out to remove.
 - f. Remove the wires from the common terminal on the cycle microswitch and the small terminal on the motor.
 - g. To install motor, reverse above procedure.
- 13. Cooler Assembly. When placing a LCM4 machine at a location, CAUTION should be taken to keep adequate clearance in the rear and front bottom screens for proper circulation. The front screen assembly should be removed and cleaned regularly for proper operation of the refrigeration system.

IMPORTANT: Removal or damage of the screen can cause air flow problems resulting in damage to the refrigeration system.

The cold control is located inside the cooler unit on the bottom right corner (Page 41, Item 1) with the standard setting set on #4.

14. Removal of Can Dispensing Unit.

- a.Remove the third shelf from the machine.
- b. Remove the middle two screws from the top of the cooler door. (Page 35., Item 10.) Tilt the complete door assembly down and lift up for removal.
- c. Remove the two "L" brackets holding the cooler assembly to the cabinet. (Page 39., Item 27.) Disconnect the two plugs from the right-hand side of the cooler unit.

- d. Pull the can unit out. (Because of the weight, it is recommended that two persons complete this task.)
- e. Remove the four corner screws (not shown) on can unit underside and one front center screw that attaches the can unit with the refrigeration unit.
- f. Lift can unit off for exposure to the refrigeration unit.

15. Removal of Gum and Mint Motor and/or Ejectors.

Disconnect the two wires going to the motor and remove the four screws holding it to the shelf. The components attached to the front base can also be replaced. These consist of the gum and mint shelf front (Price tabs and selection), gum and mint shelf front base, gum and mint display front stop (plastic) and the gum and mint ejector.

NOTE: Before replacing the gum and mint motor, it would be helpful to tap the motor first with the screws. Assemble the four components together and mount them to the motor making sure that the head crank of the motor is inserted into the ejector. Replace the four screws and test vend that selection for proper operation.

16. Chilled Air Machine.

When placing a chilled machine at a location CAUTION should be taken to keep adequate clearance in the rear and front bottom screen for proper circulation. The front vent screen assembly should be removed and cleaned periodically for proper operation of the refrigeration system.

NOTE: The cold control setting (Page 47., Item 7.) should be set on the #4 position.

17. Removal of Cooling Unit - LCM3 Only.

Replacing a cooling unit can be done by removing the two screws from the Air Duct Support Bracket. Then, lift the air duct up and out of the cooling unit. Remove the two

screws in the bottom of the cooling pan located to the right and next to the blower. Remove the two screws. The cooling unit can now be pulled straight out from the angle guides. Reverse the procedure to put the cooling unit back in the machine.

cleaning

The Snackshop LCM will do the best merchandising job for you if it is kept clean. The display window can be cleaned with any good glass cleaner. The exterior and interior surfaces should be cleaned with warm water and mild detergent. Rinse thoroughly and dry all surfaces.

CAUTION:

Do not use any cleaners containing silicon, as this could cause electrical failures.

The main product shelves can be best cleaned with the spirals and product spacers removed. Refer to page 4. for removal of spirals and page 5. for removal of the product spacer.

Clean the acceptor on the changer frequently, accumulated dirt in this area can cause coins to hang or not be accepted. Follow recommended cleaning procedures as described by the manufacturer.

IMPORTANT:

Can Vendor: clean the refrigeration screen (Page 57, Item 6.) weekly to prevent voiding the warranty on the refrigeration unit.

optional equipment ____

1. **Ventilating Fan:** (Part #660441 - 120 volts) (Part #660441 - 230 Volts)

The ventilating fan keeps a steady flow of air moving through the vendor cabinet. Installation of the fan takes only a few minutes. All the vendors are wired with a fan plug on the junction box for easy installation.

2. **Special Spirals.** Special candy spirals are available for use in the 5-selection snack shelves. For the sake of identification, the back end of these spirals are colored RED and should never be used in the 10-selection candy shelves.

These spirals allow vending products that are too wide for the standard candy columns, but, may be too thin for the regular snack spirals. A product pusher and spacer should be used where required. Part numbers for these special spirals are as follows:

400139-1
12 space special spirals
400140-1
15 space special spirals
400141-1
18 space special spirals
400142-1
24 space special spirals
400143-1
30 space special spirals
400151-1
20 space special spirals

NOTE: The difference between the standard candy spiral and the special candy spiral used in the wide snack columns is in the overall length of the spiral. The special spiral is shorter than the standard candy spirals.

CAUTION:

Do not attempt to use the special candy spirals in a 10 selection shelf.

3. Soup Dispenser LCM (Kit 750083)

A canned soup dispenser is available as an option for use in the 5-selection snack shelves. The dispenser is easy to install and holds up to nine cans in the unit. 4. Dollar Bill Validators & Changers. The validators & changers take only a few minutes to install and may be purchased through the manufacturer of the unit. LCM machines will only use 24 volt validators & changers.

_trouble shooting chart

Problem	Cause	Remedy	
No power	No lights	Check wall outlet for correct wiring, and line cord. See page 3.	
	Lights work - no power to board	Check transformer outputs & circuit breakers	
	No power to the board	Check wiring connections	
	Defective power board	Replace power board	
	Display blank	LCM machines-24VAC at white wires at P1	
Won't take coins	No power to machine	Check wall outlet, line cord & voltage	
	Defective changer	Replace changer	
	Machine only accepts one coin	Machine lost its vend prices - reprice and test	
	Defective circuit breaker	Replace circuit breaker	
	No power to coin payouts	Replace power board <i>or logic</i> board on LCM machines	
Won't payout coins/incorrect change returned	No voltage	Check voltages	
	Defective power board	Replace power board	
	Defective coin mechanism.	Replace coin mechanism.	
	Jammed coins in tube	Remove coins	
Won't take bills	No coins in coin tubes	Fill coin tubes	
	Belts or stacker doesn't run on power-up	Check for 24 VAC at P1	
	Belts run-bill goes half way but won't accept	Replace validator	
Says make another selection	Motor ½ cycled	Home motor and retry /LCM do mode 5 test vend	
	Selection lost its price	Reset prices	
	Motor won't turn	Swap shelves with another shelf and retry	
		Check shelf harness connection to board	
		Check 24VAC to logic board /white wires LCM	

trouble shooting chart_____

Problem	Cause	Remedy
Use correct change	Coin tubes empty	Re-fill coin tubes
	Says use correct change with coin tubes full	Replace coin mechanism
Spirals turn more than one turn	Capacitor discharging current	Re-solder capacitor or replace motor
	Loose wire on motor	Repair wire
	Defective motor switch	Replace switch
	Defective control board	Replace control board
More than one motor turns together	One of the motor wires is shorting out	Check each individual motor for loose or pinched wire
	Defective control board	Replace control board
	Incorrect vend motors installed	Gray or black bodied motors for LCM
Unable to enter service mode	Check plugs on control board	Power down and remove and install connectors
	Defective changer	Replace changer
	Defective main board	Replace board
Coin mechanism jackpots	Incorrect voltage	Check voltages± 10%
	Defective coin mechanism	Replace coin mechanism
	Defective board	Replace control board
Motor doesn't home on door	No voltage	Check for correct voltages
close	Defective door switch	Replace door switch
	Defective board	Replace board

multi-drop bus errors

The following table lists the Multi-Drop Bus errors that may be displayed in the Diagnostics Mode:

Multi-Drop Bus Error	Display
Invalid changer scale factor	"CscF"
Defective coin tube sensor	"tSnS"
Coin jam detected	"CJAM"
Coin tube jam detected	"tJAM"
Coin acceptance problem detected	"CnEr"
Acceptor unplugged	"AcEr"
Coin changer ROM checksum bad	"ChEr"
Invalid acceptor sacle factor	"bScF"
Defective bill sensor	"bSnS"
Bill jam detected	"bJAM"
Bill stacker is full	"stFL"
Bill cash box is out of position	"Cshb"
Bad bill motor detected	"bMtr"
Bill acceptor ROM checksum bad	"bLEr"
Invalid card reader scale factor	"rScF"
Card error detected	"CdEr"
Invalid card detected	"bCrd"
Card reader jam detected	"rJAM"
Communications error detected	"CoEr"
Card reader failure	"brdr"
